Professional Summary

Enthusiastic Software Engineer with an M.Tech in Computer Networks and Information Security. Hands-on experience developing full-stack applications, automation tools, and cloud-ready backend services using Python, FastAPI, React, and Node.js. Strong foundations in programming, operating systems, networking, and problem solving. Eager to contribute as an Associate Software Engineer by applying engineering principles, analytical thinking, and a continuous learning mindset.

Technical Skills

- **Languages:** Java, Python, JavaScript (ES6+), TypeScript, SQL
- **Core CS Fundamentals:** Data Structures, Algorithms, Time & Space Complexity, Object-Oriented Design, Debugging
- **Backend & Frameworks:** Spring Boot (basic), FastAPI, Django, Node.js, Express.js
- **Databases & Storage:** PostgreSQL, MongoDB, MySQL, In-Memory Data Structures
- **Systems & Tools:** Git, Linux (WSL), Docker (fundamentals), VS Code, Postman

Education

M.Tech Computer Networks & Information Security 2021–2023

Sreenidhi Institute of Science and Technology, Hyderabad

- Published research: "Student Engagement Prediction in Online Session" (IJRTICC)

B.Tech Electronics and Instrumentation 2015–2019

Keshav Memorial Institute of Technology, Hyderabad

Experience

Technical Developer Academic Engineering Support Jul 2024 – Present

ImaginXP College Dekho, Hyderabad

- Contributed to building a Python-based automation tool that improved academic workflow efficiency and reduced manual effort.
- Assisted engineering cohorts with full-stack development concepts, debugging, and improving code quality.
- Helped maintain curriculum repositories and ensured alignment with modern engineering standards including microservices and Docker.

FutureTech Fellow Full Stack Trainee Dec 2023 – Jul 2024

NSE TalentSprint, Hyderabad

- Built a full-stack code editor with React and Node.js featuring real-time preview and secure sandbox execution.
- Strengthened fundamentals through agile sprints, peer programming, and structured problem-solving exercises.

Key Projects

Lightweight Relational Database Engine (LRDE) *Java, Data Structures*

[Source Code](#)

Designed and implemented a lightweight relational database engine in Java supporting table creation, data insertion, and query execution. Built a modular query parser and execution layer using core data structures for efficient in-memory storage and retrieval. Ensured correctness and debuggability of query workflows, and added a minimal desktop interface for controlled interaction with the core engine.

Real Estate Listing Platform *Next.js, MongoDB, RBAC*

[Live Demo](#)

Developed a full-stack property listing system with JWT-based authentication and role-based access control. Optimized database queries and API responses to improve page rendering performance and data consistency.

Image-to-PDF Conversion Service *FastAPI, Python*

[Live Demo](#)

Implemented a backend service to convert images into PDF documents with concurrent request handling and efficient file processing, focusing on low latency and reliability.

Automated Test Generator *Python, Streamlit*

[Live Demo](#)

Built an automation tool for educators to generate customized assessments using rule-based question selection and randomized logic.
